Haiti Solar Power Generation and Energy Storage

Overview

Haiti faces significant challenges in generating and distributing energy reliably, and lack of access to affordable and reliable power significantly hinders investment and business development. The majority of electricity is produced using imported fossil fuels. The government is exploring. EDH's inability to provide reliable, centrally-supplied power continues to drive demand for power equipment, such as new electrical power systems, generators. Haiti's relatively underdeveloped electricity grid means it can integrate renewable energy into its energy supply. According to the World Watch Institute study in 2014.
