Photovoltaic panels for household power generation

APPLICATION SCENARIOS

Overview

Household photovoltaic is a type of distributed photovoltaic, that is, by installing solar photovoltaic panels on the roof or courtyard of the house, solar energy is converted into electricity for household use, and the excess electricity is sold to the grid (self-generation and self-use, surplus electricity is connected to the grid), or the generated electricity is directly sold to the grid in full to obtain electricity fee income (full access to the grid).
